

LEAD THE WAY

**Groundbreaking
wear part solutions**

combi wear parts

move the earth

SHAPE THE FUTURE WITH AN INNOVATIVE WEAR PART SYSTEM

High performance, user-friendly and economical ground engaging products.

From a custom-built foundry in Sweden, Combi Wear Parts produce unique solutions and wear parts for the construction, mining and dredging industries. With a clear focus on user-friendliness, improving our customers productivity and lowering costs, we aim to be in the forefront of an ever-changing industry.

C-REX

Maximum operation time

User-friendly and suitable for work both in quarries and construction work.

PROCLAWS

Best possible wear protection

With a functional and unique design, this versatile tooth effectively handles the forces during operation.

THE PERFECT PARTNER

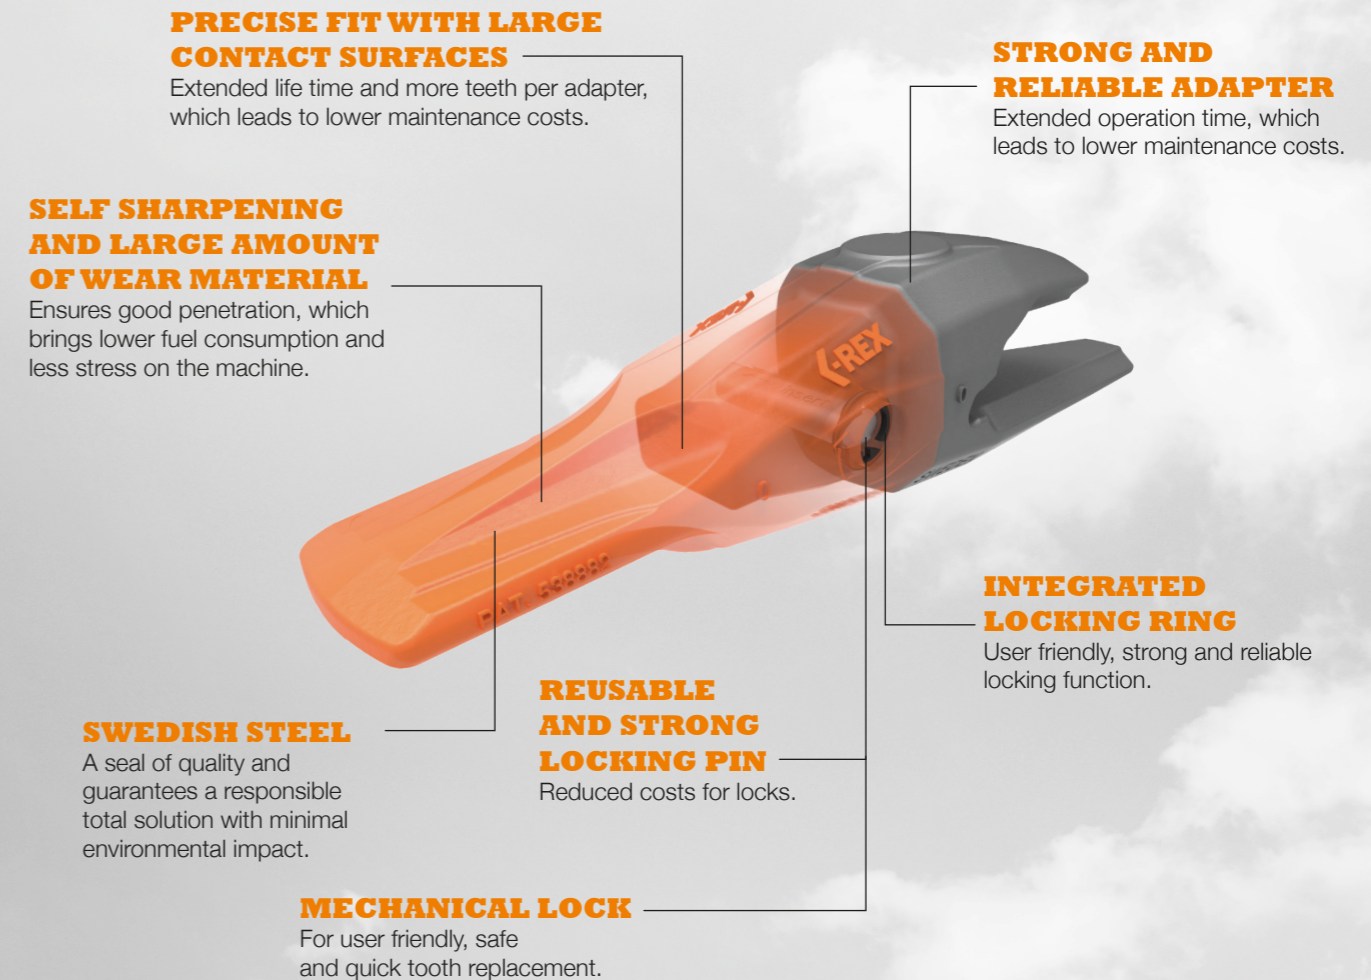

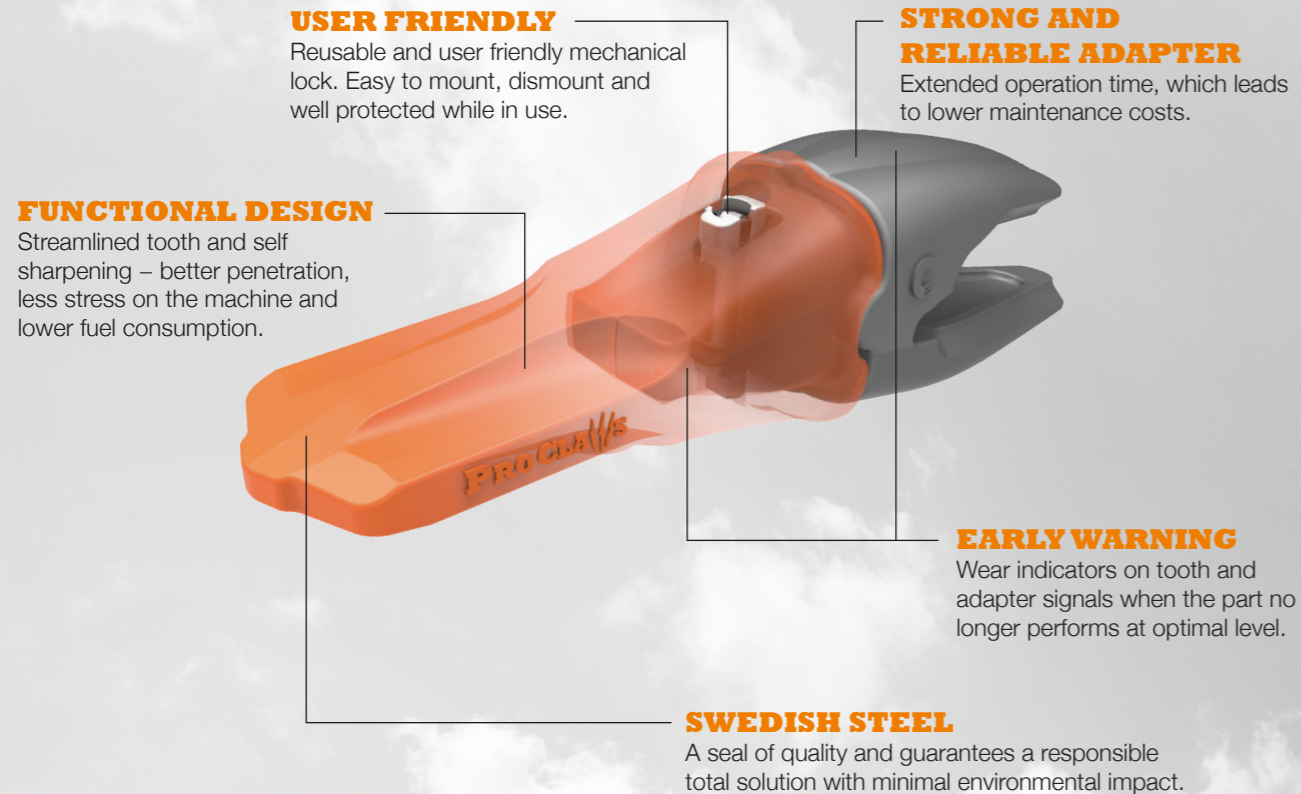

Better penetration, less stress on the machine and a mechanical lock that is safe and easy to mount and dismount. ProClaws offers a wide variety of benefits as well as areas of usage. Its functional design makes it perfectly suited for quarry and

mining applications and the teeth maintain maximum sharpness through their entire lifetime. The fact that it is made out of high quality Swedish steel and that you can get them in a variety of sizes makes them both versatile and long-lasting.

THE SUPREME SOLUTION

C-REX is a high performing system solution that delivers significantly lower operating costs. To achieve this, we have maximized the length of the teeth, proportion of wear material and reinforced the adapters. C-REX is made out of quality

Swedish steel and perfectly suited for both excavators and wheel loaders working at construction sites or in quarries. No matter what machine or application you are working in, you can always rely on an user-friendly wear part system with extended lifetime.

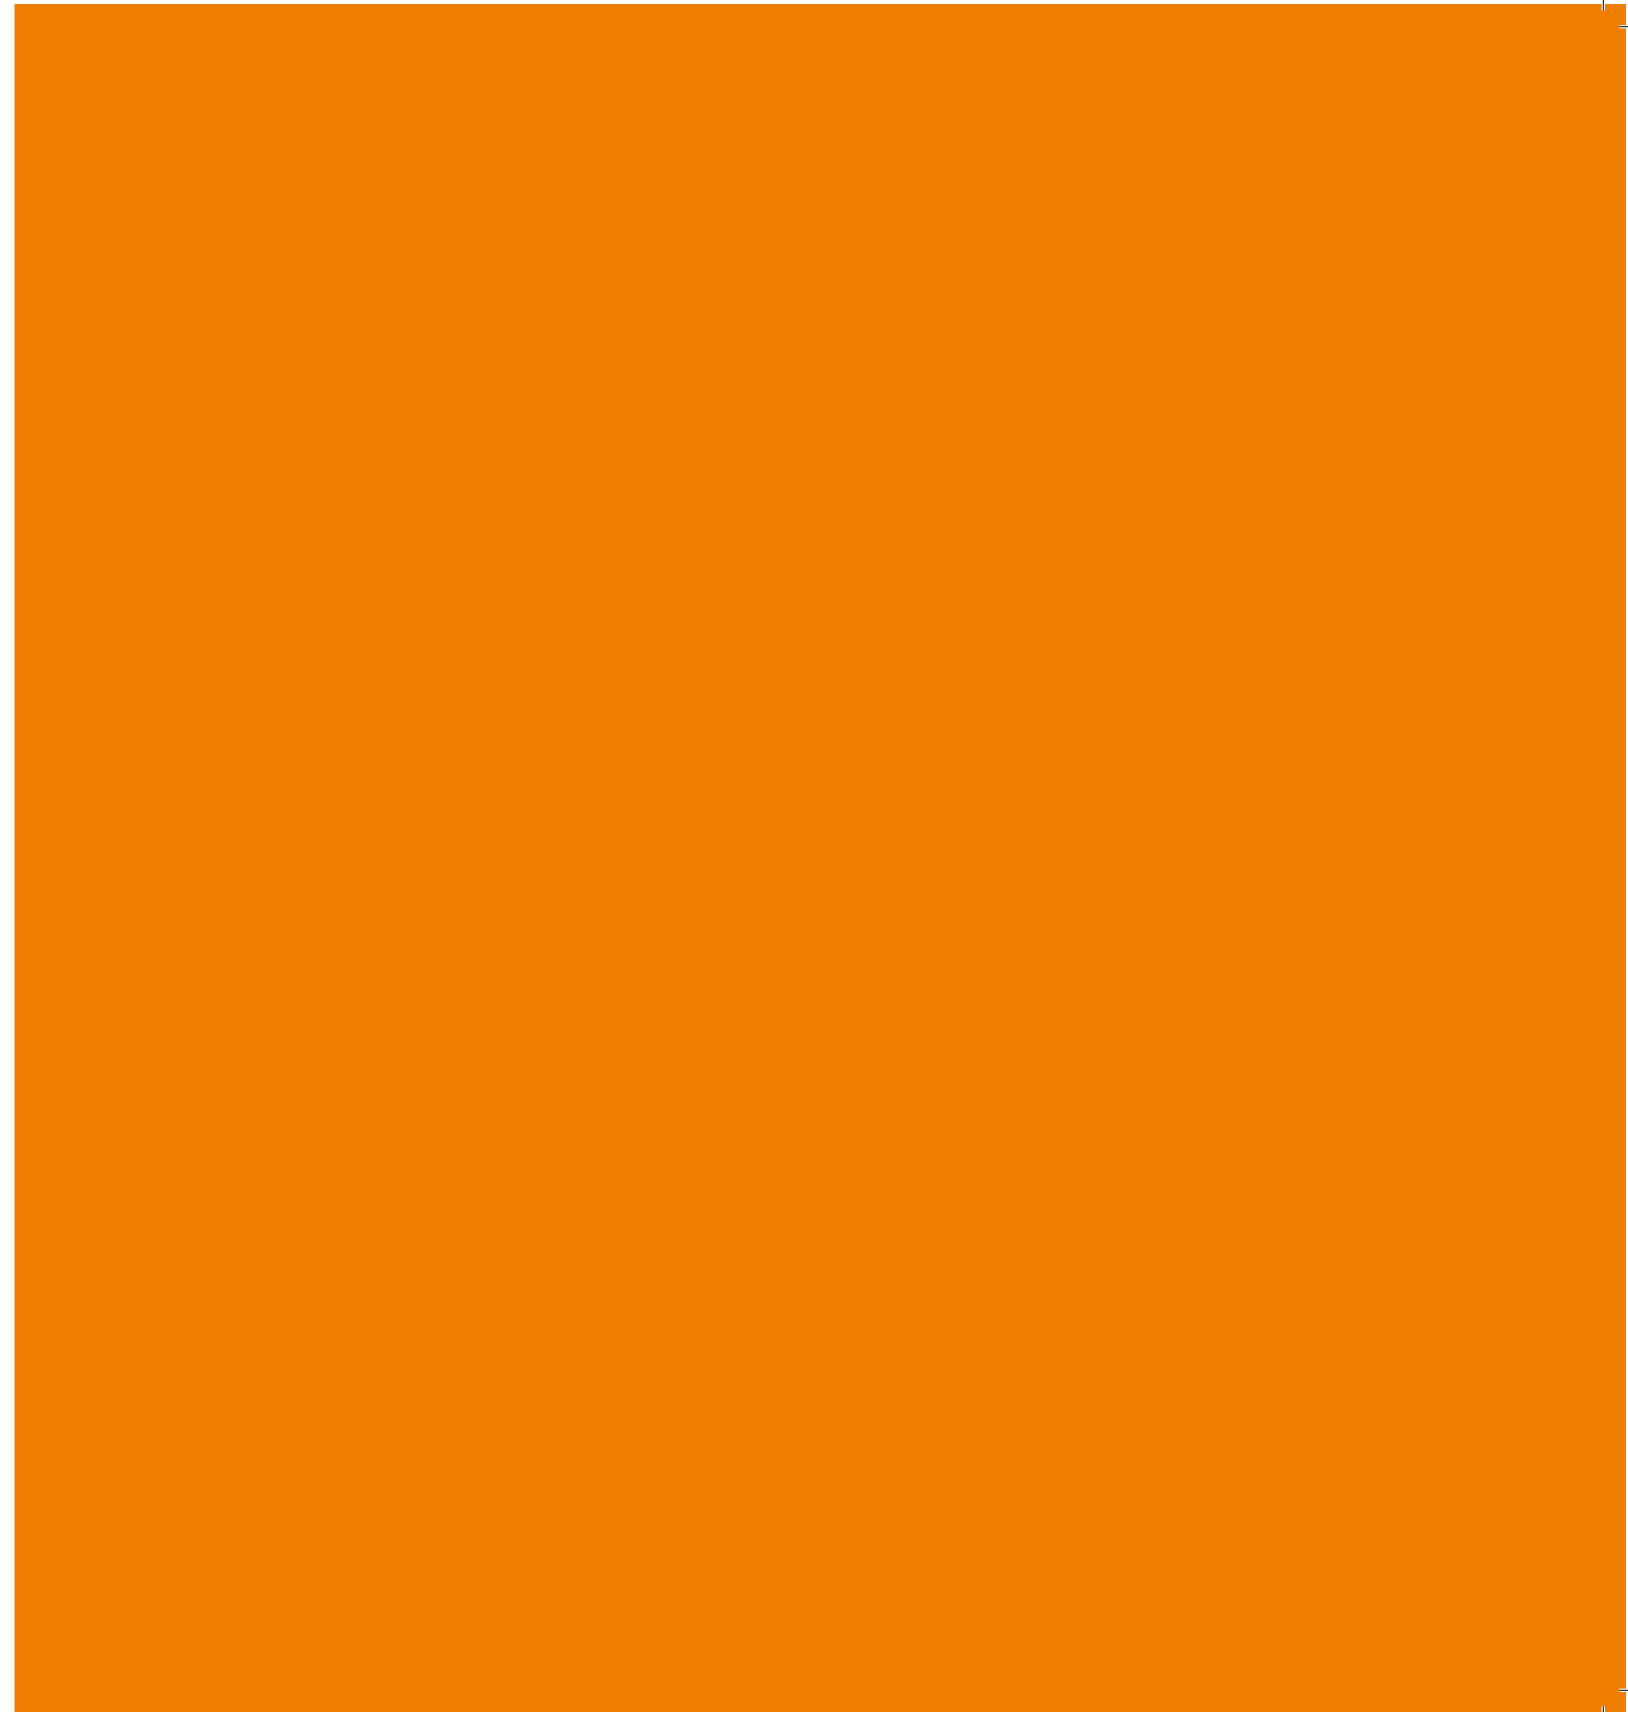

MORE SUPPORT FOR YOUR MACHINE

Our teeth will take the first impact when excavating or loading, but your bucket will still be exposed to wear. Therefore, we recommend that you give your machine an upgrade with our complementary products. We offer a wide range of products that protect your bucket and increase the lifetime of your equipment. By using shrouds and ProMite for protection, bucket steel for reparation and safety hooks when lifting you

can feel safe during operation and get the most out of your machine. Our selection of shrouds is optimized to fit together with our C-REX or ProClaws systems but the products generally fit on all buckets.

For more information about our complementary products, please visit www.combiwearparts.com

SHAPE THE FUTURE

Combi Wear Parts offer capability and capacity to partners and clients worldwide. With unique and user friendly solutions we deliver increased productivity and better total economy.
